## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-17, 19, 20, 22-24, 26 drawn to polynucleotides, vectors and host cells, method of producing the polypeptide, antisense oligonucleotide, classified in class 435, subclass 69.2.
- II. Claims 18, 21, drawn to a polypeptide with endoglucanase activity, classified in class 435, subclass 200.
- III. Claim 25, drawn to a detergent composition comprising an endoglucanase, classified in class 510, subclass 114.
- IV. Claim 27-36, drawn to a method of producing ethanol, classified in class 435, subclass 161.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, III are patentably distinct from each other. The polypeptide of group II, the polynucleotide of group I, the detergent composition of group III, each comprise amino acid sequences and nucleotide sequences and a mixture of organic and inorganic chemicals which are chemically unrelated, do not require each other for practice; have separate utilities, such as use of the group II polypeptide to catalyze a hydrolytic reaction versus the use of group I polynucleotide in a hybridization reaction versus the use of group III detergent composition in laundry business and are subject to separate manufacture and sale. The groups have acquired separate status in the art and separate fields of search.

Art Unit: 1652

Inventions II and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the enzyme of group II can be used as an enzyme in a detergent composition as opposed to its use in the manufacture of ethanol.

Inventions I, III and IV are patentably unrelated to each other. The polynucleotide of group I and the detergent composition of group III is neither made nor used in the method of group IV. They are subject to separate manufacture and sale. The groups have acquired separate status in the art and separate fields of search.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1652

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
